

Datoru organizācija un asambleri(1),25/26-R Test 6

Started on Tuesday, 7 October 2025, 10:18 AM**State** Finished**Completed on** Tuesday, 7 October 2025, 10:21 AM**Time taken** 3 mins 18 secs**Grade** 3 out of 3 (100%)**Question 1**

Correct Mark 1 out of 1

Given a code fragment to copy 20 bytes from field rec1 to rec2.
Choose *True* if it works correctly, or *False* if it doesn't.

```
rec1  byte  20 dup(?)
rec2  byte  20 dup(?)
```

```
; Copy 20 bytes from memory field rec1 to rec2
```

```
    mov     ecx, 20
    xor     esi, esi
c:   mov     bl, rec1[esi]
    mov     rec2[esi], bl
    loop    c
```

☐ True☒ False ✓

Question 2

Correct

Mark 1 out of 1

Which statement about execution of the LOOP instruction is incorrect?

Choose the one best answer.

- ☐ The register ESP is always used by the LOOP instruction.
- ☐ The value of the register ECX is incremented by the size of the array item processed.
- ☐ The value of the register ECX is incremented by 1.
- ☐ Value of the ECX register is pushed onto stack.
- ☒ All of the above are incorrect
- ☐ None of the above is incorrect

Question 3

Correct

Mark 1 out of 1

The program contains a code to count zero elements of the given array of bytes and store the result in the register EBX.

```
.data
D      byte  10, 0, -30, 0
.code
start  proc
        mov     edi, 0
        xor     ebx, ebx
        mov     ecx, 4
tst:    cmp     D[edi], 0
        jnz     next
        inc     ebx
next:
        ; MISSING
        loop    tst
; . . .
```

Which instruction should be inserted in the line with the comment MISSING?

Choose the one best answer.

- ☐ add edi, 2
- ☐ jz tst
- ☐ dec ebx
- ☐ je next
- ☒ add edi, 1
